PROFESSIONAL SUMMARY

Pre-final year Computer Science (AI & ML) student with a strong portfolio of 3+ end-to-end ML projects. Proficient in Python, TensorFlow, and Scikit-learn, with hands-on experience deploying predictive models that achieved 90%+ accuracy in fraud detection and healthcare domains. Seeking to leverage expertise in data modeling and algorithm optimization to drive impact at a dynamic tech firm.

EDUCATION

VIT Bhopal University B.Tech in Computer Science and Engineering (AI & ML); CGPA: 8.4	Bhopal, India 2023 – 2027 (Expected)
---	---

EXPERIENCE

Ethara.ai <i>LLM Post-Training Intern</i>	Remote Feb 2026 – Present
- Optimized LLMs for video editing workflows via Supervised Fine-Tuning (SFT) and RLHF, evaluating outputs against human preference data to elevate pipeline reliability. - Engineered an LLM-driven prompt system for a video color picker feature, enhancing model comprehension and accuracy for user-guided selection.	
CodSoft <i>Machine Learning Engineer Intern</i>	Remote Nov 2025 – Dec 2025
- Engineered 3 scalable ML pipelines (Fraud, Spam, Churn) processing 15,000+ records, improving data quality by 20% via automated Pandas preprocessing. - Optimized Random Forest classifiers to achieve a 15% reduction in false positives, significantly enhancing fraud detection reliability.	

PROJECTS

AI Mock Interview System — <i>Python, NLP, Flask, ML</i>
- Developed an AI-powered simulation tool capable of generating 50+ unique interview scenarios using NLP. - Integrated a Flask REST API to provide instant feedback, reducing user practice loops by 40%. - Tested by 20+ peer students, receiving a 4.5/5 user satisfaction score for relevance and technical accuracy.
Heart Disease Prediction — <i>Python, Scikit-learn, Pandas</i>
- Designed a predictive model analyzing 4,000+ patient records to classify heart disease risk with high precision. - Achieved 92% prediction accuracy by tuning hyperparameters, outperforming standard Logistic Regression models by 12%. - Reduced feature dimensionality by 25% using Principal Component Analysis (PCA), optimizing training speed without data loss.
Signature Forgery Detection System — <i>OpenCV, TensorFlow, CNN</i>
- Built a Convolutional Neural Network (CNN) trained on a dataset of 1,000+ signature images to detect forgeries. - Attained a 96% detection rate on test data by implementing advanced image thresholding and contour extraction. - Optimized model inference time to under 200ms, making the system viable for real-time verification applications.

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, HTML/CSS, Java
ML & AI: TensorFlow, Scikit-learn, OpenCV, NLP, Deep Learning, Computer Vision, Pandas, NumPy
Web Frameworks: Flask, React.js, Express.js
Tools & Platforms: Git, GitHub, VS Code, Google Colab, Jupyter Notebook, AWS (EC2, S3)
Coursework: Data Structures & Algorithms (DSA), OOP, DBMS, Operating Systems

CERTIFICATIONS & ACHIEVEMENTS

Certifications: Machine Learning in Python (University of Michigan), Google IT Support Professional Certificate, NPTEL Cloud Computing (Elite + Gold, Top 5%), Oracle OCI AI Foundations Associate, Oracle OCI Generative AI Professional
Hackathons: Participant in EY Techathon 6.0 (Top 100 teams), Adobe Hackathon
